Nashua Region Solid Waste Management District

DISPOSAL of LATEX PRODUCTS

All paints / sealers that can be cleaned with soap and water are Latex. Latex paint and other latex products are **not** accepted at the Household Hazardous Waste collections.

Try to donate leftover paint to an individual or local service organization for their use; if that's not possible, please follow these instructions to safely dispose of excess latex products:

For small quantities (containers less than $\frac{1}{4}$ full), remove cover and dry out in the can.

For larger quantities, use several heavy-duty plastic trash bags to line a sturdy cardboard box. Pour in alternate layers of paint and an absorbent material (kitty litter, shredded paper, etc). Stir and allow to air dry until the material has solidified.

Once solid, it is safe to dispose of the material. Nashua residents must take dried out latex products, in dark plastic trash bags, directly to the Four Hills Landfill and put them into the trash box there. A regular residential permit is required, and may be obtained at the scalehouse; proof of residency is required.

For more information, call the Solid Waste Department at 589-3410, or the Nashua Region Solid Waste Management District at 424-2240.
